SEGMENT PERFORMANCE & SCENARIO MODEL

Profit contribution by segment

Segment	Net Sales	COGS	Profit	Gross Profit %
Channel Partners	$1,800,594	$483,790	$1,316,803	73.1%
Enterprise	$19,611,694	$20,226,240	$-614,546	-3.1%
Government	$52,504,261	$41,116,088	$11,388,173	21.7%
Midmarket	$2,381,883	$1,721,780	$660,103	27.7%
Small Business	$42,427,918	$38,284,750	$4,143,168	9.8%

Key findings & recommended actions

1. Government is the largest profit contributor ($11,388,173). Protect this segment's delivery and account relationships.

2. Enterprise has a negative profit of $-614,546. Review pricing, product mix, discounting and cost-to-serve before expanding this segment.

3. Overall gross profit margin is 14.23%; COGS is 85.77% of net sales. Monitor margin alongside revenue, not in isolation.

4. Discounts total $9,205,248 (7.20% of gross sales). Review discount approval thresholds and test alternative policies.

5. 2014 contributes 77.8% of net sales. Compare quarterly patterns and investigate seasonality with a longer time series.

Scenario model

The accompanying Excel workbook includes editable assumptions for discount change, COGS change and sales-volume change. Forecast sales, forecast COGS, forecast profit, gross profit percentage and profit variance recalculate from those inputs. These are planning scenarios, not predictions.

Data note: 700 rows across 2013–2014. The source has 53 blank Discount Band entries; they are labeled 'Not specified' in the cleaned data rather than inferred. Financial amounts are in USD as represented by the sample dataset.
